PROJECTS

Classification of Handwritten Characters **Oct 2019 - Dec 2019**
Fundamentals of Machine Learning, University of Florida, FL, USA

Developed a deep CNN to classify Handwritten Characters, by training it with the Handwritten Character Dataset under the guidance of Prof Alina Zare, inspired by the famous architecture **"Lenet"** (http://yann.lecun.com/exdb/publis/pdf/lecun-01a.pdf) by utilizing the Adam Optimizer, Batch Normalization and dropout and achieved a classification accuracy of **97.3%** on a customised data set prepared by Prof Zare

Implementation of P2P network **Nov 2019 - Dec 2019**
Computer Networks, University of Florida, FL, USA

Created a peer-to-peer(P2P) network for file downloading. Developed components – peer and file owner. The file owner has a file, and breaks the file into chunks of 100KB. Each peer connects to the file owner to download some chunks with the help of two threads, one acting as a server that uploads the local chunks to another peer (referred to as upload neighbor), and the other acting as a client that downloads chunks from a third peer (referred to as download neighbor). Tested the code with max **5** peers and max file size of **13.3 MB**.

- **Technology/Tools:** Socket Programming, Java

Hashtag Counter **March 2020 - April 2020**
Advanced Data Structures, University of Florida, FL, USA

Implemented a system to find the most popular hashtags that appear on social media using Max Fibonacci Heap data structure and a max priority structure to find out the most popular hashtags. Tested the code with **1M** hashtags.

- **Technology/Tools:** Java
